

*Sometimes the smallest parts  
can create the biggest screw-ups.*

**Uptime is everything.** When revenue-generating assets go down, don't get stuck **without a bounce-back strategy.**

**Increased stress** on the FM team. Longer hours. Additional repair and maintenance costs. Putting out fires to repair critical assets over other work. It all leads to more delays and a backlog of work orders.

**Disruptions to service.** Longer wait times. Reduced quality eroding the customer experience. It all leads to decreased customer satisfaction and loyalty. In other words, lost business.

**Lost revenue.** Increased repair costs. Premature asset replacement. Decreased productivity impacting the bottom line and damaging the brand reputation, potentially leading to legal or regulatory/health safety compliance issues.

At SDI, we understand that **uptime is everything.** That's why it's critical to work with a supply chain partner to develop a **proactive strategy** to measurably minimize downtime.

Find out how **Critical Stock-as-a-Service (CSaaS)** can help you improve uptime and reliability of critical revenue-generating assets by checking out [SDI.com/supply-chain-services/CSaaS](https://SDI.com/supply-chain-services/CSaaS)

**Smart critical stock management is a process.** Ours delivers results:

### **Identify Critical Assets**

Which assets impact your ability to produce? Which assets, if they fail, cause you the most pain?

### **Identify Critical Spares**

Create an inventory of spare parts. Determine which parts are critical for each asset.

### **Standardize Data**

Organize the data into a consistent format that's easy to analyze and act upon.

### **Forecast for Demand**

Facilities managers need to know how many spares will be required in the coming year.

### **Develop Sourcing Plan**

A phased plan is key – factoring in lead times, likelihood of breakdowns, and parts availability.

### **Estimate Requirements**

Based on your learning so far, develop a sense of required stock moving forward.

### **Provide Secure Storage**

On-site storage? Off-site storage in a secure location? Facilities managers need options.
